

Agricultural and forest management companies

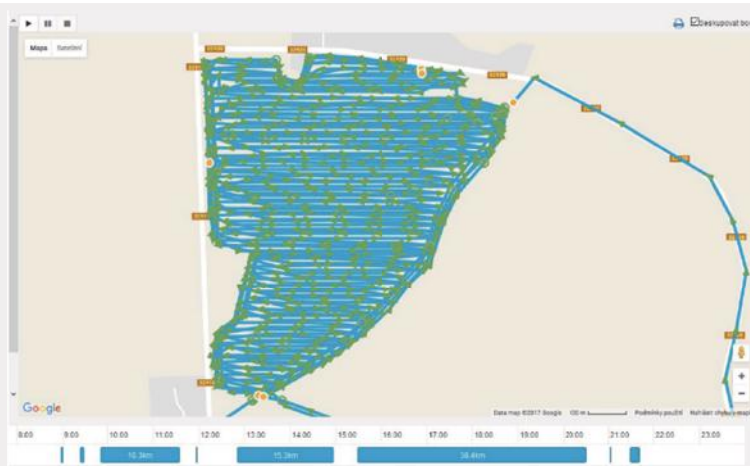

Trexee is a product suitable for every company that within the scope of its business lends or borrows something.

The work of agricultural and forest management companies depends to a great extent on the season, which means that companies do not use their machinery through the year. Therefore, they need flexible equipment which will enable them to use a product based on their actual needs.

What can Trexee monitor?

- The **number of km travelled**
- The **number of hours worked**
- Vehicle movement** (arrival at a work performance location, arrival back at the garage)
- The coordinates of machinery at a particular time** (in case there is a need for service intervention)
- Tilting of machinery** in view of the variation of the landscape and notification in the event of a roll-over of machinery
- Breaks**
- How work was done**

Example of monitoring a combine harvester with the MAXI module

What benefits does Trexee offer?

- A complete overview of machines and their use
- Flexibility of use for machinery in use at a particular moment
- Checking use of machinery for non-work-related purposes
- Checking compliance with the assigned work period
- Protection against theft of machinery
- A perfect tool for quick service intervention thanks to navigation
- Maximum coverage thanks to the addition of a GDSP card for places where there is often a poor signal (fields, forests, meadows, etc.)
- 3D view of managed land (hilliness of terrain, elevation profile, etc.)
- Temperature sensors are able to draw attention to the risk of fire
- Motion sensors can draw attention to the theft of wood
