

Construction

Trexee is a product suitable for every construction company who needs to know every move of the people or machinery within the construction area.

What do construction companies need to know?

- The exact position of all their assets (excavators, containers, trucks, heavy machinery, etc.)
- Whether the material was delivered to and unloaded in the right place
- The optimal route for container delivery and pickup
- Complete overview of the company's property
- Construction area movement analysis
- Impact analysis – proper handling of assets
- Maintenance overview
- Whether the container / machinery has always been used in a contractually agreed location

What do construction companies appreciate the most?

- Portable devices with extreme battery life with the possibility of hidden installation
- The ability to monitor excavators, machinery, containers, trucks, and employees without the need for fixed complex installation
- The ability to check delivery of material to the customer
- Dispatching system for drivers with route optimization
- Remote configuration of sensors settings

What other benefits does Trexee bring?

- Prevention of company property misuse by employees
- Protection against container theft
- Unlimited Logbook
