

Rental companies

Trexee is a product suitable for every company that within the scope of its business lends or borrows something.

Every rental company monitors the wear of its property (due to regular servicing, for the purposes of proper billing of customers, etc.). Trexee is a small portable device, which can be flexibly allocated to borrowed property, with maximum coverage and availability of data.

Trexee enables rental companies to record:

- **How property has been treated**, including data such as how many km a vehicle has travelled and in what weather.
- Whether the borrowed property has always been in a **contractually agreed location**.
- **The coordinates of the borrowed property** (in case of the need for the rental company to retrieve the property or for theft prevention).

[All such information can help companies to save money.](#)

For what types of rental companies is Trexee suitable?

- Logistical equipment (semi-trailers, carts, towing vehicles, etc.)
- Construction machinery (dredgers, cranes, platforms, etc.)
- Farming equipment (tractors, ploughs, blades, etc.)
- Campers
- Cars
- Canoes, boats, and watercraft
- Motorcycles and scooters
- Wagons
- Traffic signs
- Waste containers
- Portable toilets
- Paddle boats at hotels and recreation centres
