Transport and Logistics

Trexee is a product suitable for every company that within the scope of its business lends or borrows something.

What do transport and logistics companies appreciate the most?

- ○ The ability to monitor **freight, vehicles, and employees** without the need for complex installation.

- ○ **The ability to check compliance** with the planned route and monitoring of stops.

- ○ The ability to use the product only when freight is en route.

- ○ **The ability to check compliance** with the previous points, when freight has left the warehouse, when it has crossed a border, when it has arrived at the customer's location, etc.

- ○ **The ability to check delivery of freight** to the customer by the contractually agreed deadline; Trexee makes it possible for the driver to inform the client about potential changes or delays and thereby avoid unpleasant situations.

- ○ **The ability to transfer the module** without the need for installation and the risk of contractual fines and related flexibility for selection of the vehicle/freight that will be monitored.

- ○ **Availability of information about vehicle** and freight coordinates without limitations on data and availability of the signal.

  - • Coverage throughout the EU as part of service with no limitation of data. And thanks to GDSP, Trexee also provides the greatest availability of signal among all solutions on the market.

- ○ The ability to inform the customer about the status of a consignment.

  - • Relief for dispatchers, who spend up to a third of their time resolving customer queries regarding consignment status. Trexee makes it possible to inform customers regularly.

- ○ **Support during compliance with legislative rules** for completion of the trip log.

- ○ **Extreme battery life.**

What other benefits do companies get?

- ○ Checking of freight shifting during transport and avoiding potential damage to it. **Thanks to monitoring, the company can guarantee** that the goods will be transported without accident. This guarantee is typically important for transporting structures, electronics, etc.

- ○ **The ability to monitor** the temperature of freight thanks to temperature sensors in the Maxi module; Trexee can inform about fluctuations in temperature around individually set boundaries. This function is typically important for companies that carry food or other goodssusceptible to changes in temperature (Coldchains).

- ○ **Prevention of the misuse** of company property by employees.

- ○ **Prevention of false reporting** of insurance claims. Trexee offers transport companies evidence of the coordinates of vehicles in the event of a false allegation of accident or property damage.

- ○ **A complete** overview of the company's property and clients.
